### Step 1. ASSESSMENT: Identify who to test

- **1a.** Hospital admissions from ER or current inpatients with signs and symptoms compatible with COVID-19 (fever, cough, SOB, myalgias, fatigue, new loss of taste or smell, nausea, vomiting, diarrhea etc) with symptom onset in last 14 days (VCMC = BioFire test / SPH = Cepheid test)
- **1b.** Patients requiring urgent surgery, urgent procedure, or results would aid in decisions related to infection control cohorting, and/or where significant PPE could be conserved if test is negative (VCMC/SPH Cepheid test)
- **1c.** Residents of long-term care facilities, correctional facilities, psychiatric facilities, homeless/homeless shelter, and patients on hemodialysis (HD), with signs and symptoms compatible with COVID-19, who are not being admitted but facility **DOES NOT** have ability to isolate patient while awaiting results (VCMC/SPH Cepheid test)
- **1d.** All women in labor admitted to Labor and Delivery (VCMC/SPH Cepheid test)
- **1e.** Residents and staff of long-term care facilities, correctional facilities, psychiatric facilities, homeless/homeless shelter, and patients on HD, with signs and symptoms compatible with COVID-19, who are not being admitted and facility **DOES** have ability to isolate patient while awaiting results or who are being admitted and results needed for return to facility (PH test)
- **1f.** Patient who is stable for discharge home with cough or shortness of breath **OR** any of the following symptoms: fever¹, chills, muscle pain, headache, sore throat, new loss of taste or smell, diarrhea, nausea, vomiting, congestion/runny nose (QUEST test)
- **1g.** Patient who is asymptomatic **AND** meets any one of the following criteria
  - Healthy partner or support person of COVID-19+ mother who has chosen to separate from infant while inpatient (VCMC/SPH Cepheid test)
  - Close contact of person with lab-confirmed COVID-19+² (QUEST test)
- **1h.** All patients with planned non-elective surgery (PH test)
- **1i.** Healthcare personnel and first responders with signs and symptoms compatible with COVID-19 (PH test)

***If testing indication unclear, then the ER attending and admitting attending to discuss whether or not to test patient***

**PATIENTS WHO MEET THE ABOVE CRITERIA SHOULD BE TESTED**

### Step 2. ISOLATION

- **2a.** Immediately place surgical mask on patient and move to separate room/area, separated by 6 feet from others
  - Airborne isolation rooms should be reserved for patients undergoing procedures that are likely to generate respiratory aerosols (see AGP document on med staff website for full list)
- **2b.** If patient is being sent from clinic or Public Health (PH) to the Emergency Room (ER):
  - Place surgical mask on patient and call (805) 652-6168 (VCMC) or (805) 933-8663 (SPH) to notify physician on duty.
  - Instruct patient to go directly to the ED and call above numbers from ED parking lot.
- **2c.** All staff entering room must use **Droplet precautions (surgical mask), eye shield or goggles, gown and gloves**
  - If performing aerosol generating procedure (see AGP document on med staff website for full list), patient is on a ventilator, or critically ill, then **Airborne Precautions [N95 mask or Powered Air-Purifying Respirator (PAPR)] required in addition to face shield or goggles, gown and gloves**

---

¹ Fever may be subjective or confirmed (100.4 F)
² Close contact is defined as spending >15 minutes within 6 feet of an infected person not wearing a mask, and includes household contacts, visitors, and healthcare workers (not wearing a mask or eye protection while in contact with the patient), or having been in direct contact with infectious secretions (i.e. was coughed on, shared utensils with, was provided care by, or was cared for) of a patient with COVID-19
Step 5. DETERMINE DISPOSITION

5a. Disposition:
- Need clearance from Infection Prevention for isolation removal while inpatient (see Policy on Discontinuation of Transmission-Based Precautions for details)
- Obtain Public health for clearance for discharge or transfer if patient is confirmed positive COVID
  - COVID suspect patients with unknown results can be discharged without PH clearance
- PH phone: Monday - Friday, 8:00 am - 5:00 pm: (805) 981-5201, After-hours, weekends, and holidays: (805) 214-7057
- Discharged PUIs may be told to self-isolate and follow home isolation instructions until they are cleared.
- Discharge instruction under patient education on Cerner and on med staff website.
5b. **Cleaning**: Notify Environmental services for proper cleaning of room/equipment

- If no aerosol generating procedure (AGP) was performed, and only NP swab collected for testing, rooms at both campuses can be cleaned immediately after patient exits without waiting.
- If AGP performed, will need to wait the following amount of time prior to cleaning:
  - VCMC, SPH negative pressure room: 45-minute wait time prior to cleaning
  - VCMC standard room: 3.5 hour wait time prior to cleaning
  - SPH standard room: 1.5 hour wait time prior to cleaning
- Portable equipment should be cleaned according to the disinfection guidelines from infection control

5c. **Identification of Contacts**:

- Start process of employee self-monitoring:
  - If you become ill with fever, cough, shortness of breath, myalgias, lack of smell or taste, or sore throat, contact your direct supervisor and do not come to work until cleared
  - Employees call employee hotline: 805-981-5166. Physicians/NP/PA/Residents contact Dr. Leah Kory via Tiger Text or hospital operator
