## CPG.76 Peri-operative and Peri-procedural Anticoagulation Management

The contents of this CPG are to be used as a guide. Healthcare professionals should use sound clinical judgment and individualize patient care. This CPG is not meant to be a replacement for training, experience, CME, or studying the latest literature and drug information. In patients at high risk for thromboembolic complications, consider shared decision-making with hematology/ cardiology or vascular or internal medicine to ensure patients at high risk receive tailored optimal management in the periprocedural period.

Please refer to the attached document for summary flow-sheet and full content.
